

## DUREZZA E PARAMETRI CHIMICO-FISICI DELLE ACQUE POTABILI DEL CANTONE TICINO

Durezza totale in gradi francesi (°fr)

1 °fr = 0,1 mmol/l = 10 mg/l di carbonato di calcio disciolto in acqua

1 - 7 °fr = molto dolce 16 - 25 °fr = media durezza 33 - 42 °fr = dura

8 - 15 °fr = dolce

\* Possibili variazioni dovute alla variabilità delle fonti di approvvigionamento

() Tra parentesi le zone di distribuzione con la stessa acqua
